CUSIP:	G7S14W 101
Asset Rating:	AA+

Canadian Real Estate Security Fund

Institutional-Grade Asset-Backed Real Estate Strategy

Secured by Prime Toronto Development Assets

Executive Investment Thesis

The Canadian Real Estate Security Fund has been designed to provide qualified investors with a rare combination of capital preservation, hard asset security, inflation protection, and long-term capital appreciation through direct exposure to one of North America's most desirable and supply-constrained real estate markets.

Unlike traditional real estate funds that rely heavily on future development execution or speculative business plans, this investment is fundamentally supported by a strategically located Toronto development asset valued at approximately CAD \$450M+ (*see note below on valuation*) when fully realized (*see below*) million, before accounting for any future appreciation associated with zoning enhancements, development approvals, density increases, infrastructure improvements, or construction activities.

The Fund seeks to generate attractive risk-adjusted returns by combining:

- Existing hard asset value
- Long-term land appreciation
- Urban intensification opportunities
- Development upside
- Institutional-quality exit strategies
- Conservative capital structuring

while maintaining a strong focus on downside protection through tangible real estate ownership.

1. The Market Opportunity - Canadian Real Estate: A Multi-Trillion Dollar Asset Class

Canada's real estate market is estimated to exceed CAD \$8 trillion in value and remains one of the most attractive jurisdictions globally for long-term capital deployment.

Major factors contributing to this attractiveness include:

Economic Stability

Canada maintains:

- AAA / AA+ sovereign credit ratings
- One of the world's strongest banking systems
- Stable monetary policy
- Low geopolitical risk
- Strong legal protections for investors

Canadian real estate has historically remained resilient during:

- Global recessions
- Financial crises
- Inflationary cycles
- Interest rate volatility
- Currency fluctuations

Toronto: Canada's Economic Engine

Toronto is the largest city in Canada and the fourth-largest metropolitan area in North America.

The Greater Toronto Area (GTA):

- Represents approximately 20% of Canada's GDP
- Houses more than 7 million residents
- Continues to grow rapidly through immigration
- Serves as Canada's financial and commercial capital
- Attracts significant institutional capital globally

Toronto remains one of the most liquid and actively traded real estate markets in North America.

Immigration Driving Long-Term Demand

Canada's immigration policies continue to drive substantial population growth.

The Federal Government has established immigration targets that will continue adding hundreds of thousands of new residents annually.

Most newcomers settle within:

1. Toronto
2. Vancouver
3. Montreal

Toronto receives the largest share of this immigration inflow.

This results in increasing demand for:

- Housing
- Rental units
- Condominiums
- Mixed-use developments
- Transit-oriented communities

Structural Housing Shortage

Canada currently faces one of the largest housing deficits in its history.

Government studies estimate millions of additional housing units must be constructed over the next decade simply to meet projected population growth.

This supply-demand imbalance has created:

- Higher land values
- Increased condominium pricing
- Rising rental rates
- Increased demand for development lands
- Strong appreciation in urban properties

Institutional Capital Continues to Enter the Market

Major investors actively acquiring Canadian real estate include:

- Canadian Pension Funds
- Sovereign Wealth Funds
- Global Asset Managers
- Insurance Companies
- Private Equity Firms
- International Family Offices

Institutional demand continues to focus on:

- Multifamily residential
- Mixed-use developments
- Transit-oriented communities
- Urban infill projects

2. The Problem in Today's Market - Investors Face Increasing Uncertainty

Traditional investment products face numerous challenges:

Equity Markets

Investors face:

- Elevated valuations
- Market volatility
- Geopolitical uncertainty
- Inflation concerns

Fixed Income Investments

Bonds and traditional fixed-income products often:

- Fail to keep pace with inflation
- Offer limited upside
- Provide no participation in real asset appreciation

Private Equity

Private equity investments typically:

- Require long holding periods
- Depend heavily on management execution
- Often lack hard asset collateral

Development Investments

Many real estate development projects involve:

- Land not yet acquired
- Approvals not yet obtained
- Construction not yet financed
- Significant execution risk

Investors often assume substantial risk before tangible value has been created.

Lack of Meaningful Asset Security

Many investment structures are dependent upon:

- Revenue projections

- Business plans
- Future earnings
- Market assumptions
- without direct ownership of tangible assets.

When markets become stressed, investors may discover that their capital is not adequately protected.

Need for Capital Preservation

Sophisticated investors increasingly seek:

- Security of principal
- Asset-backed investments
- Inflation protection
- Long-term appreciation
- Stable jurisdictions without sacrificing return potential.

3. Our Solution - Canadian Real Estate Security Fund

The Fund has been specifically structured to solve these challenges.

A. Hard Asset Backing

Every dollar invested is supported directly and/or indirectly by underlying Canadian real estate assets owned by the Fund.

Unlike unsecured investments, investors benefit from:

- Real property ownership
- Land value appreciation
- Development rights
- Existing collateral security

B. Prime Toronto Development Asset

The Symington Property represents a strategically located urban development opportunity within Toronto.

Key attributes include:

- Prime location
- Transit accessibility
- Mixed-use redevelopment potential
- High-density development opportunity
- Long-term appreciation characteristics

C. Appreciation Before Construction

Unlike many development investments, the Fund's strategy begins with land ownership. Value can be created through:

Phase 1

- Land ownership and preservation. COMPLETED

Phase 2

- Planning and entitlement optimization. COMPLETED

Phase 3

- Rezoning and density enhancement. COMPLETED

Phase 4

- Development advancement.

Phase 5

- Construction and monetization.
- Each phase has the potential to increase asset value while maintaining ownership of the underlying real estate.

D. Conservative Investment Structure

The Fund seeks to preserve investor capital through:

- Hard asset collateralization
- Conservative leverage
- Strategic financing
- Institutional governance
- Independent valuation oversight

E. Multiple Exit Strategies

Unlike many real estate investments that depend on a single exit event, the Fund may pursue:

- Refinancing
- Asset sales
- Institutional acquisitions
- Joint ventures
- Recapitalizations
- REIT conversions
- Securitizations

4. Why This Investment Is Superior

1. Asset Backed by Real Property

Many funds offer exposure to ideas.

This Fund offers exposure to real assets.

Investors gain security through ownership of tangible Canadian real estate.

2. Located in an AA+ Jurisdiction

Canada offers:

- Strong legal protections
- Reliable land registry systems
- Stable banking institutions
- Strong creditor rights
- Political stability

These characteristics significantly reduce jurisdictional risk.

3. Exposure to Toronto's Growth Story

Few cities globally benefit simultaneously from:

- Immigration growth
- Housing shortages
- Limited land supply
- Infrastructure investment
- Strong institutional demand

Toronto possesses all five.

4. Institutional-Grade Opportunity

The Fund provides access to opportunities typically reserved for:

- Pension Funds
- Sovereign Wealth Funds
- Global Real Estate Funds
- Large Family Offices

while allowing investors to participate through a professionally managed structure.

5. Inflation Protection

Real estate has historically served as one of the strongest hedges against inflation.

As replacement costs increase:

- Land values rise
- Development values increase
- Rental rates improve
- Asset prices appreciate

6. Multiple Layers of Appreciation

The investment may benefit from:

- Existing Land Value
 - Immediate hard asset security.

- Density Increases
 - Additional buildable area.
- Entitlement Enhancements
 - Improved development economics.
- Infrastructure Expansion
 - Increased surrounding property values.
- Population Growth
 - Continued housing demand.
- Institutional Demand
 - Higher exit valuations.

7. Attractive Risk-Adjusted Return Profile

The Fund targets a unique balance between:

Capital Preservation	Growth Potential
Hard Asset Security	Development Appreciation
Existing Land Value	Density Optimization
Strong Jurisdiction	Rezoning Upside
Conservative Structure	Institutional Exit Premium
Tangible Collateral	Long-Term Capital Growth

Why Investors Are Looking at This Fund Today

Most investors today are searching for three things:

1. Security
 - Protection of capital through tangible hard assets.
2. Stability
 - Exposure to one of the safest legal and banking jurisdictions globally.
3. Growth
 - Participation in one of North America's strongest urban development markets.

The Canadian Real Estate Security Fund delivers all three through a structure that combines immediate hard-asset collateral with long-term institutional-grade development upside. This creates a compelling investment opportunity for qualified investors seeking both preservation of wealth and substantial future appreciation potential in a market supported by powerful demographic, economic, and real estate fundamentals.

***Footnote for Valuation:**

Value Creation & Appreciation Potential

The current valuation of the underlying Symington asset is based primarily on its existing land value and current development profile. Importantly, this valuation does not fully reflect the substantial value that may be realized through future planning approvals, density increases, rezoning initiatives, infrastructure enhancements, entitlement optimization, and ultimate development execution.

Based on preliminary development concepts and projected intensification potential, management believes the property has the potential to achieve a fully realized gross development value in excess of CAD/USD \$450 million, subject to market conditions, regulatory approvals, financing availability, and successful execution of the development strategy.

This creates a significant value creation opportunity whereby investors gain exposure to:

- Existing hard asset security at current valuations;
- Long-term land appreciation;
- Increased density and entitlement value;
- Enhanced project economics through redevelopment;
- Potential realization of a fully developed asset value exceeding \$450 million; and
- Institutional-grade exit opportunities through sale, recapitalization, refinancing, joint ventures, or strategic acquisitions.

Unlike traditional development investments that require investors to assume substantial early-stage construction risk, the Fund's strategy allows investors to participate in the appreciation of a tangible underlying asset while benefiting from the potential transformation of a current \$100 million asset into a fully realized development with an estimated value exceeding \$450 million upon completion.

Enhanced Investment Thesis

- Current Asset Value: Approximately \$100 million
- Potential Fully Realized Development Value: \$450 million+
- Potential Value Creation: \$350 million+ of incremental value creation

The investment thesis is centered on acquiring and controlling strategically located urban development lands in Toronto, preserving capital through hard-asset ownership, and systematically unlocking value through planning, entitlement, density optimization, development execution, and market appreciation. This approach provides investors with exposure to potentially significant capital growth while maintaining the security of ownership in one of North America's most stable and desirable real estate markets.

Why This Matters? - Few investments offer investors the ability to participate in:

- ✓ A current hard asset valued at approximately \$100 million
- ✓ Located in one of the world's safest real estate jurisdictions
- ✓ Backed by strong demographic and housing demand fundamentals
- ✓ Supported by a development pathway that may increase the asset's value to \$450 million+
- ✓ Providing a potential 4.5x increase in underlying asset value over the development lifecycle

This combination of asset-backed security, capital preservation, and substantial development-driven appreciation represents the core differentiator of the Canadian Real Estate Security Fund.
