

Pharmaceutical Fund II SP

Class A shares – dividends	tbd%
Minimum Investment:	\$1M

Class B shares – dividends	tbd%
Minimum Investment:	\$5M

INVESTMENT THESIS

The Future of Medicine Will Be Personalized.

The Future of Cannabinoids Will Be Pharmaceutical.

We Are Building Both.

“We are not building a cannabinoid manufacturer. We are building the world’s first AI-powered precision cannabinoid pharmaceutical platform, enabled by a patented manufacturing process that provides a unique regulatory and supply-chain advantage.”

INVESTMENT OPPORTUNITY

Building the World’s First AI-Powered Precision Cannabinoid Pharmaceutical Platform

Executive Overview

- Healthcare is approaching a breaking point.
- Chronic disease now accounts for approximately 74% of global deaths according to the World Health Organization.
- More than 1.7 billion people worldwide suffer from chronic pain.
- Over 970 million people suffer from mental health disorders.
- More than 55 million people live with dementia.
- Hundreds of millions suffer from autoimmune and inflammatory diseases.

Yet the pharmaceutical industry continues to rely largely on a treatment model developed decades ago:

- One drug.
- One indication
- One patient population.

This model is becoming increasingly ineffective, expensive, and unsustainable. Global healthcare spending exceeded \$10 trillion annually and is projected to surpass \$15 trillion over the next decade.

At the same time, opioid dependency, adverse drug reactions, treatment failures, and rising healthcare costs continue to accelerate.

The next evolution of medicine will not be defined by discovering another blockbuster drug. It will be defined by precision medicine—matching the right therapy to the right patient at the right time.

Our company is uniquely positioned at the convergence of four transformative global megatrends:

- Artificial Intelligence
- Precision Medicine
- Pharmaceutical Manufacturing
- Cannabinoid Therapeutics

We are building the world's first AI-powered precision cannabinoid pharmaceutical platform supported by a fully issued patented manufacturing process that creates a significant regulatory and competitive advantage.

Our vision is not to participate in the cannabinoid industry.

Our vision is to redefine it.

THE GLOBAL PROBLEM

The Failure of Traditional Pharmaceutical Models

The pharmaceutical industry spends approximately \$2.6 billion to bring a single new drug to market.

Drug development timelines often exceed 10 to 15 years.

More than 90% of drug candidates fail during clinical development.

Many approved therapies produce highly variable outcomes between patients.

The result:

- Rising healthcare costs
- Growing patient dissatisfaction
- Increasing drug dependency
- Significant adverse events
- Limited treatment personalization

In the United States alone:

- More than 80,000 opioid-related deaths occur annually
- Chronic pain affects over 50 million adults
- Healthcare expenditures exceed \$4.5 trillion annually

Globally:

- Depression affects approximately 280 million people
- Anxiety disorders affect over 300 million people
- Sleep disorders affect over 1 billion people
- Autoimmune diseases impact hundreds of millions
- Neurological diseases are among the fastest growing causes of disability

The pharmaceutical industry requires new therapeutic approaches.

WHY CANNABINOIDS?

The Most Underdeveloped Pharmaceutical Opportunity of the Century

The human endocannabinoid system is one of the largest biological regulatory systems in the body.

It influences:

- Pain signaling
- Inflammation
- Immune function
- Mood
- Sleep
- Neuroprotection
- Metabolism
- Gastrointestinal function
- Cellular homeostasis

Researchers have identified over 140 cannabinoids.

Yet only a small fraction have been investigated systematically.

Today the global cannabinoid market remains largely fragmented and dominated by:

- Consumer products
- Wellness products
- Commodity ingredients
- Non-standardized formulations

Virtually no company has successfully integrated:

- Pharmaceutical-grade manufacturing
- Artificial intelligence
- Precision medicine
- Proprietary patient data
- Drug discovery

into a single platform. This creates a once-in-a-generation opportunity.

OUR SOLUTION

The Cannabinoid Intelligence Platform™

We are building an integrated platform consisting of three proprietary pillars.

Pillar 1: Patented Pharmaceutical Manufacturing

Our fully issued process patent establishes a defensible position in the production of pharmaceutical cannabinoid active pharmaceutical ingredients (APIs).

This provides:

- Intellectual property protection
- Regulatory differentiation
- Manufacturing defensibility
- Strategic partnering opportunities
- Potential licensing revenue

As global regulations evolve toward pharmaceutical standards, compliance becomes a critical competitive advantage.

Many current producers will be unable to meet future pharmaceutical requirements.

We are building for that future today.

Pillar 2: Artificial Intelligence Drug Discovery

Our AI platform is designed to analyze millions of data points across:

- Scientific literature
- Clinical studies
- Pharmacological databases
- Molecular interactions

- Disease pathways
- Patient outcomes

The system identifies previously undiscovered relationships between:

Cannabinoids → Targets → Disease States → Patient Populations

The objective is to dramatically accelerate therapeutic discovery while reducing development costs.

Traditional pharmaceutical discovery:

- 10–15 years
- AI-assisted discovery:
- Potentially 30–70% faster target identification and candidate prioritization.

Pillar 3: Precision Cannabinoid Medicine

Current medicine treats populations.

We intend to treat individuals.

Using AI-driven analytics, we aim to identify:

- Which cannabinoid works best
- Which disease subtype responds
- Which patient characteristics predict success
- Optimal dosing protocols
- Optimal delivery methods

This transforms cannabinoid therapy from generalized treatment into precision medicine.

THE DATA MOAT - The Most Valuable Asset Will Not Be Cannabinoids

- The most valuable asset will be data.
- Every patient outcome.
- Every formulation.
- Every dosage protocol.
- Every indication investigated.
- Every biomarker identified.
- Creates proprietary intelligence.
- As the platform grows, the AI becomes increasingly predictive.
- The resulting data moat becomes exponentially more valuable.
- Competitors can replicate products.

They cannot replicate years of proprietary patient data and machine learning models.

MARKET OPPORTUNITY

Multiple Multi-Billion-Dollar Markets

- Pain Management = \$80+ Billion
- Neurology = \$150+ Billion
- Mental Health = \$400+ Billion
- Sleep Therapeutics = \$100+ Billion
- Inflammatory & Autoimmune Diseases = \$120+ Billion

Precision Medicine

- Projected to exceed \$250 Billion by 2030

Artificial Intelligence in Healthcare

- Projected to exceed \$180 Billion by 2030

Cannabinoid Therapeutics

- Projected to exceed \$60 Billion globally over the next decade
- Our platform sits directly at the intersection of all these markets.

COMPETITIVE ADVANTAGE

Why We Win

Traditional Cannabis Companies:

- Compete on cultivation
- Compete on extraction
- Compete on price
- Low margins
- Minimal IP

Biotechnology Companies:

- Expensive discovery
- Long timelines
- Limited cannabinoid expertise

Technology Companies:

- AI expertise
- No pharmaceutical infrastructure

Our Platform Combines:

- ✓ Patented Manufacturing
- ✓ Pharmaceutical Compliance

- ✓ AI Discovery
- ✓ Precision Medicine
- ✓ Proprietary Clinical Data
- ✓ Novel Intellectual Property Creation
- ✓ Regulatory Advantage

This combination is extremely rare and difficult to replicate.

REVENUE MODEL

Revenue Stream 1
Pharmaceutical API Sales

Revenue Stream 2
AI Discovery Partnerships

Revenue Stream 3
Drug Development Collaborations

Revenue Stream 4
Licensing of Novel Therapeutic Applications

Revenue Stream 5
Precision Medicine Software Platforms

Revenue Stream 6
Intellectual Property Licensing

Revenue Stream 7
Strategic Pharmaceutical Partnerships

EXIT POTENTIAL

The largest pharmaceutical companies are actively pursuing:

- AI-enabled drug discovery
- Precision medicine platforms
- Novel therapeutic modalities
- Data-rich healthcare assets

Potential acquirers include:

- Major pharmaceutical companies
- Major biotechnology companies
- Healthcare AI companies

- Global contract manufacturing organizations
- Large healthcare platforms

The most valuable pharmaceutical acquisitions of the last decade have centered around proprietary platforms rather than individual products. Our objective is to build a platform company. Not a single-product company.

VISION

We believe the future of medicine is personalized.

We believe cannabinoids represent one of the largest untapped therapeutic opportunities in modern healthcare.

We believe artificial intelligence will fundamentally transform drug discovery.

By combining patented pharmaceutical manufacturing, artificial intelligence, precision medicine, and proprietary clinical data, we are creating a company positioned to become the global leader in cannabinoid-based precision therapeutics.

This is not the next cannabis company.

This is the next-generation pharmaceutical platform.

And we believe it has the potential to transform how chronic disease is treated worldwide.
